INTERNATIONAL OCEAN GOVERNANCE
EU COMPONENT TO GLOBAL OCEAN OBSERVATIONS

Many stakeholders Many observations **ONE OCEAN**

Working with multiple stakeholders in a global framework to increase the collection and use of ocean data needed to address societal challenges.

EU4OceanObs serves to catalyse essential partnerships between European and international infrastructures, programmes and projects across the global ocean observing value chain to deliver a coordinated fit-for-purpose system.

To achieve this, the action supports two overarching partnerships:
the G7, through the G7 Future of the Seas and Oceans Initiative (FSOI),
and the Group on Earth Observations (GEO) through the GEO Blue Planet Initiative.

EU4OceanObs is an EU-funded Partnership Instrument managed by the European Commission's Service for Foreign Policy Instruments and implemented by Mercator Ocean International.
